warm home!*

PRODUCT CATALOG

cookers ▪ stoves ▪ fireplaces ▪ electric boilers

2025/26

Senko d.o.o. is a family business, founded in 1978, which has been working on the development, production and improvement of stoves, ovens and fireplaces on wood biomass for over thirty-five years. Years of continuous growth, constant investment in new technologies and complete commitment to the development of our own innovative products have resulted in the fact that today we are a modernly equipped factory that, on 4000 m² of production space, with professional and experienced employees, develops new models of stoves in accordance with EN standards.

We can guarantee our customers top product quality because within SENKO production we have a complete process: from our own product development department, preparation of parts by laser cutting and punching, CNC robotic welding of boilers and line assembly to a modernly equipped laboratory for quality control and product testing.

We aligned all SENKO products with ECodesign requirements and developed and tested them according to demanding EN standards, depending on the product group.
With the SENKO name, we guarantee the quality of stoves, ovens, fireplaces, and in recent years also electric boilers!

Heating with wood will give the perfect warmth, comfort and positive atmosphere to your whole environment and to your home.

WHY HEATING WITH WOOD BIOMASS?

- ENVIRONMENTALLY FRIENDLY ▪ 100 % REUSABLE ▪
- SAFE AND SIMPLE USAGE ▪ EASY INSTALLATION ▪
- SIMPLE STORAGE; HARMLESS FOR HOUSEHOLD AND ENVIRONMENT ▪

A well-planned restoration of forest areas is a sustainable source of thermal energy which, when burned, does not increase CO₂ emissions in the atmosphere, given that the same amount of CO₂ is needed for the regrowth of an equal amount of wood biomass.

ADVANTAGES OF SENKO COOKERS

An external combustion air supply is mounted at the rear side of the cooker.

All models are equipped with glass firedoor to enable control of fuel combustion.

SENKO cookers are coated with firebrick, which has a positive affect on the combustion quality.

Chimney / Flue connection is height adjustable to facilitate easier installation.

Intake of secondary air into the firebox provides additional fuel efficiency and combustion of harmful gases - SENKO GREEN LABEL.

Cooking plates are 8 mm thick and ensure long operational life of the cooker.

To change the grate's summer - winter position during firing, models for central heating offer thread driven firebox grate.

POSSIBILITY!
Glass-ceramic cooking plate (CERAN).

A modern kitchen and dining area. In the foreground, a dark wooden dining table is set with white mugs, bowls, and a glass carafe. Four black wicker chairs with metal legs are around the table. In the background, a kitchen counter with a sink and faucet is visible, along with wooden upper cabinets and a white refrigerator. Large windows show a view of autumn trees. The image is framed by a red border on the left and bottom, and a dark grey border on the top and right.

ROOM STOVE

SPECIAL OFFER
stove with ceramic plates.

A modern interior scene featuring a brown leather tufted armchair with a dark wood frame and a five-star base. To the left of the chair is a floor lamp with a brass-colored pole and a black adjustable shade. Behind the chair is a dark blue wall with three wooden shelves. The top shelf holds a green ceramic vase, the middle shelf holds a gold-colored picture frame and a small potted plant, and the bottom shelf holds a brass-colored candle holder and a stack of books. The floor is light gray concrete, and a small dark gray rug is under the chair. The image is framed by a yellow border on the left and top, and a dark gray border on the right and bottom.

PELLET

STOVES

SENKO PELLESTOVES

SENKO pellet stoves are used for heating residential spaces and/or as central heating and at the same time they can be a decorative element in every ambience.

Fan blows warm air from the stove to the room through special grids on the front side of the stove. The second fan is leading the primary air to the firebox and at the same time flue gases are lead from the firebox to the chimney. SENKO pellet stoves are distinguished by their high efficiency (91-96%) as well as a very low environmental pollution level. They are designed and produced down to the last detail in order to satisfy, in the best way possible, all consumers' needs regarding functionality and safety.

SENKO PELLESTOVES FOR CENTRAL HEATING HAVE MOST EQUIPMENT ON THE MARKET:

- » high-efficiency circulation pump
- » closed expansion vessel
- » safety valve 2.5 bar
- » valve for filling-emptying the boiler
- » automatic air vent

ADVANTAGES

SENKO PELLET STOVES

- ◆ *Dosing of pellets to the firebox is automated and programmed with an electronic switch by means of a screw feeder.*
- ◆ *Control panel secures a simple handling and adjusting of all required parameters*
- ◆ *Regulation by remote control - switching on / switching off, adjusting the fan speed, heating power.*
- ◆ *Possibility to programme daily / weekly work schedule of the stove (6 available programs).*
- ◆ *Possibility to regulate space heating temperature by means of a room thermostat.*
- ◆ *Possibility of connecting outside air required for combustion (avoiding oxygen consumption in the room for dwelling).*
- ◆ *Safety devices which are automatically stopping the dosing of pellets to the firebox and reporting the alarm signal on the control panel.*
- ◆ *Possibility of monitoring the pellets consumption in kg/h.*
- ◆ *Possibility of regulation by smartphone - wifi module (OPTION).*
